

**SCHEDULE K: SERVICE DEFINITION FOR DIRECT INTERNET ACCESS (DIA) SERVICE**

**1. DIA Service Description**

The Vysiion DIA Service provides an Internet connection at the Customer Site, without connecting to the Vysiion network. This is provided using various third-party connectivity options. The type of connectivity can be confirmed prior to Order placement and incorporated into the Contract prior to order placement if required by the Customer. Unless agreed otherwise in the Contract, Vysiion will not monitor DIA Services nor provide Customer Premises Equipment.

**2. DIA Service Demarcation Point (SDP)**

The DIA SDP is the point up to which Vysiion's DIA Service obligations apply and the DIA Service Level Agreement applies. At the Customer Site, the SDP for the DIA Service is the network terminating equipment from the relevant third-party supplier.

**3. Target Service Commencement Date**

Vysiion offers the Customer a target lead-time equal to the lead-time that Vysiion receives from the relevant third-party supplier plus ten (10) Working Days. This can be confirmed prior to Order placement and incorporated into the Contract prior to order placement if required by the Customer.

**4. DIA Service Level Agreement**

Vysiion offers the Customer the same service levels as Vysiion receives from the relevant third-party supplier. These can be confirmed prior to Order placement and incorporated into the Contract prior to order placement if required by the Customer.
